

# Using the new tools. A short demo

**CONCERTREACH**  
CONCERTING EXPERIMENTAL DATA  
AND IN SILICO MODELS FOR REACH

LIFE17 GIE/IT/000461

# CONCERT REACH

New and updated software:

- **VEGA** (42 new QSAR models added)
- **VERA** (new software)
- **SWAN** (new software)
- **TOXREAD** (10 new modules added)

## VegaHub website

All software can be downloaded from the VegaHub website:

<https://www.vegahub.eu/download/>

VEGA HUB QSAR Download Community News Contacts

### Download

Here you can download in Silico models (QSAR and read across) for specific properties, or programs to build up your own model

#### VEGA QSAR [Read more](#)

**Description** VEGA provides tens of QSAR models to predict tox, ecotox, environ, and phys-chem properties of chemical substances. With VEGA you can get a clear measurement of the reliability of the prediction, and also visualize the most similar compounds of your target substance, for read across assessment. VEGA has been used by ECHA to identify substances suspect to meet Annex III criteria for REACH.

**Last Release** March 15, 2023

## The software applications

- All the applications are Java-based stand-alone software
- No need to install them, they just need Java installed
- For Windows users, a version of Java is included with the applications
- Run locally, no data sent on external servers
